

Supervisor: Jim Woods

Suhrit Padakanti & Satvik Talchuru

Team: Campus Cloud & Identity Team

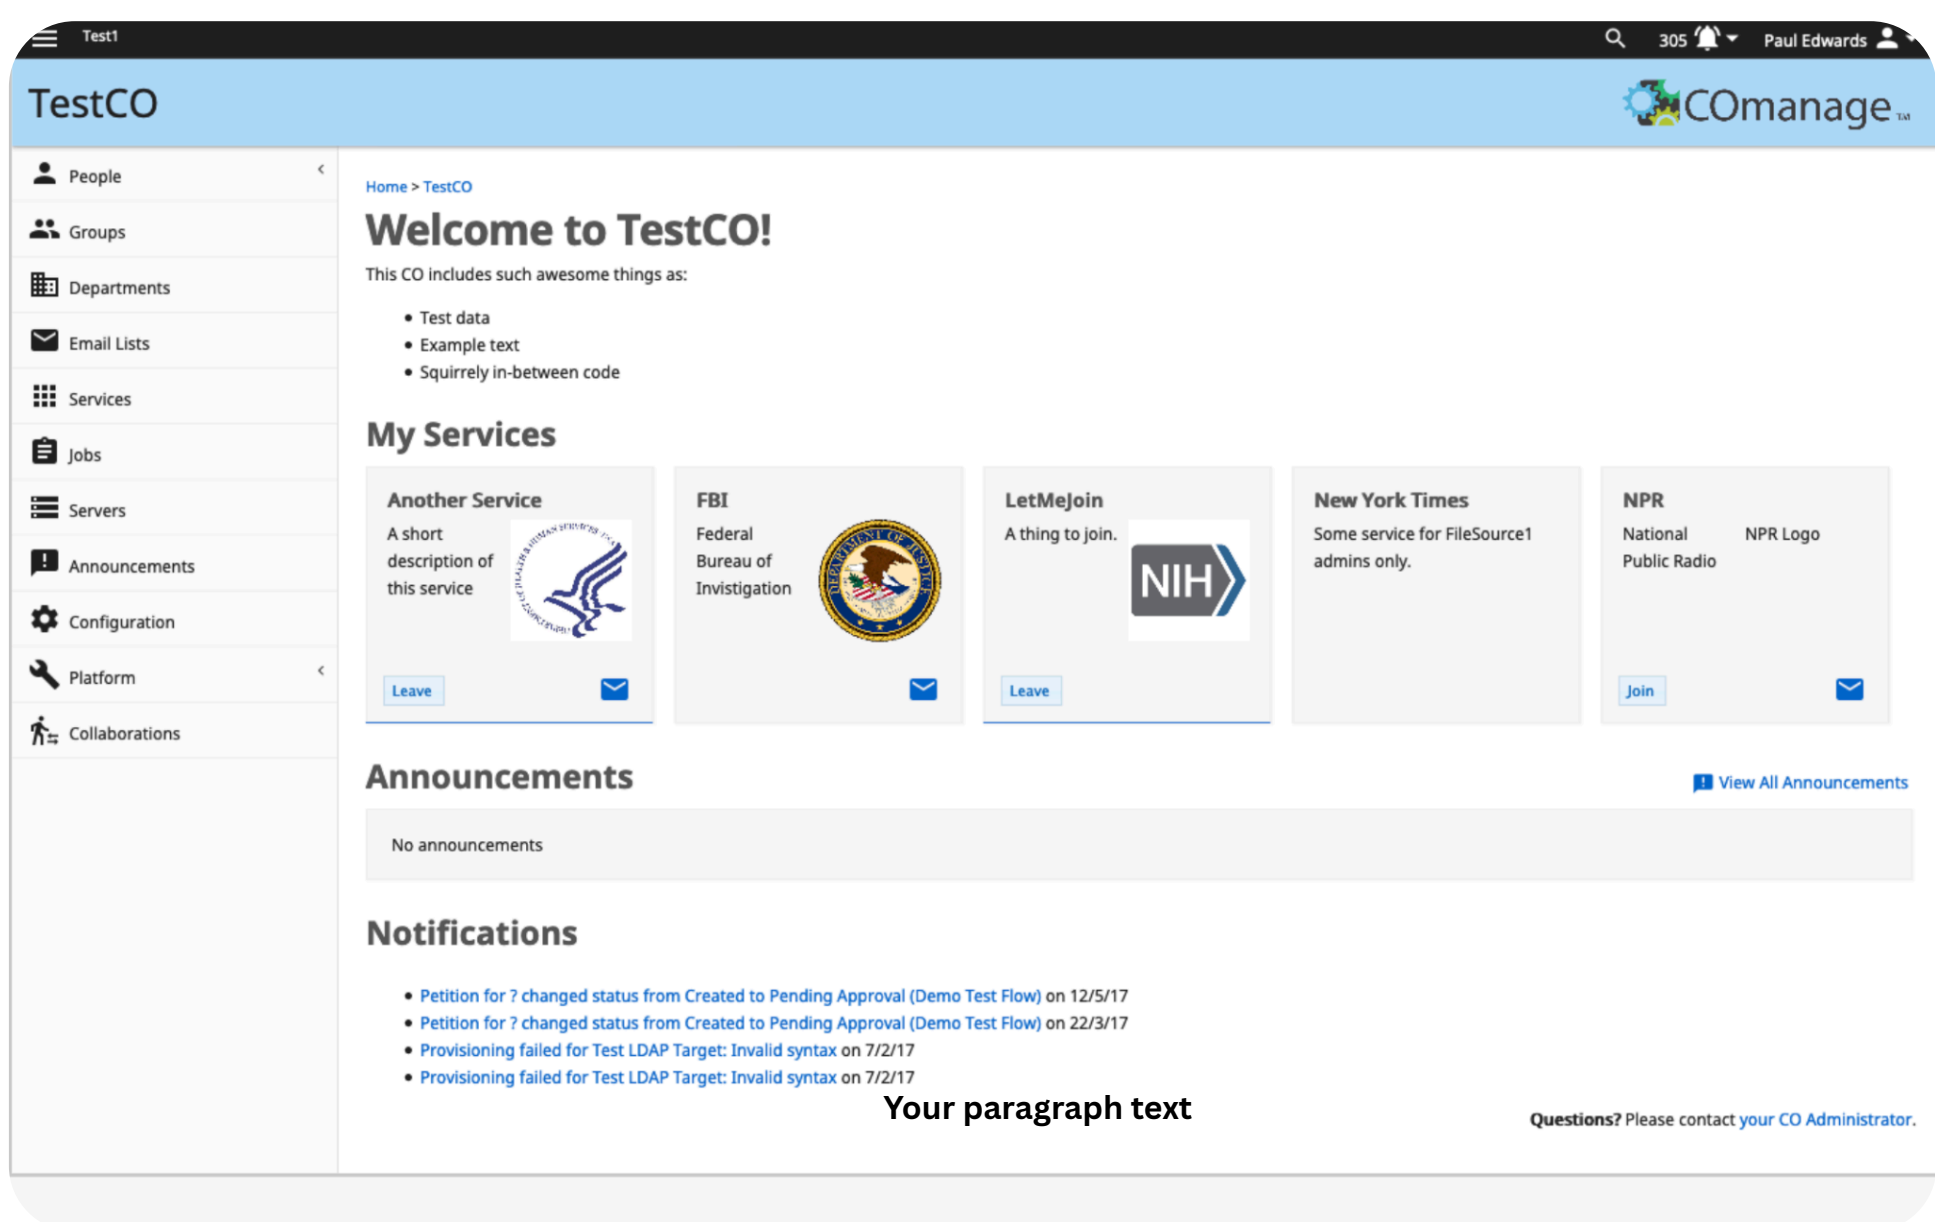

Suhrit

- Fourth year Computer Science Major
- Passionate about Software Engineering
- Hobbies: Guitar, DJing, Reading, and Lifting

Dynamic CDA Directory - API-Driven Replacement

- The existing static iFrame directory on the Connect website lacks search functionality, caching, and modern usability
- Designed and developed a full serverless stack - Terraform infrastructure, Node.js Lambda with OAuth2 and DynamoDB caching, and a zero-dependency searchable frontend
- Currently in pre-deployment phase, with infrastructure provisioning and integration testing as next steps

COManage Registry

- **Problem:** lack of centralized lifecycle automation in current identity system
- **Goal:** deploy and configure an open-source IAM platform to support centralized role-based identity lifecycle management at UCSB
- Designed a containerized deployment with Docker and configured MariaDB database integration, integrated with AWS microservices
- Structured CO, CO groups, and CO people to support scalable role-based provisioning

Satvik

- Third-year Data Science and Statistics + Economics Double Major
- Interested in Infra + Cloud Engineering
- Hobbies: Basketball, Gym, Reading

Google User Sync Migration to AWS Lambda

- Legacy user sync relied on on-prem RabbitMQ and PowerShell scripts: lacks version control and requires manual recovery during failures
- Re-architected workflow into serverless, event-driven pipeline to parse JSON messages and execute Google account updates
- Implementing Lambda orchestration, GAM command generation, and automating Google Admin updates
